The Ministère des Ressources naturelles et des Forêts (MRNF) thanks each of the following organizations and individuals for the use of the photographic material:

- Goldex, Agnico Eagle Mines Ltd. (p. 8);
- Hydro-Québec (p. 4);
- Mathieu Dupuis, photographer;
- Niobec Inc. (p. 3);
- Québec Mining Association;
- Raglan Mine, Glencore Canada Corporation (p. 2)

Rich in minerals and business opportunities

Québec has significant mining potential that accounts for one fifth of Canada's mineral production. The province produces and develops about 30 commodities, making it the most diverse resource base in Canada.

Québec has all the minerals and raw materials necessary for battery manufacturing, particularly lithium, nickel, cobalt and graphite.

Critical and strategic minerals: Québec's vital role

Québec contributes to supplying critical and strategic minerals, since it produces nickel, niobium, graphite, copper, zinc, cobalt and platinum group elements and mining projects are underway for lithium, vanadium, rare earth elements and tantalum.

A track record that attracts attention:

- **1st in Canada to launch a plan for the development of critical and strategic minerals**
- **1st producer of high-purity scandium oxide in North America**
- **#1 producer of niobium in the Northern Hemisphere**
- **#1 producer of graphite in Canada**
- **Over 50% of lithium projects in Canada**

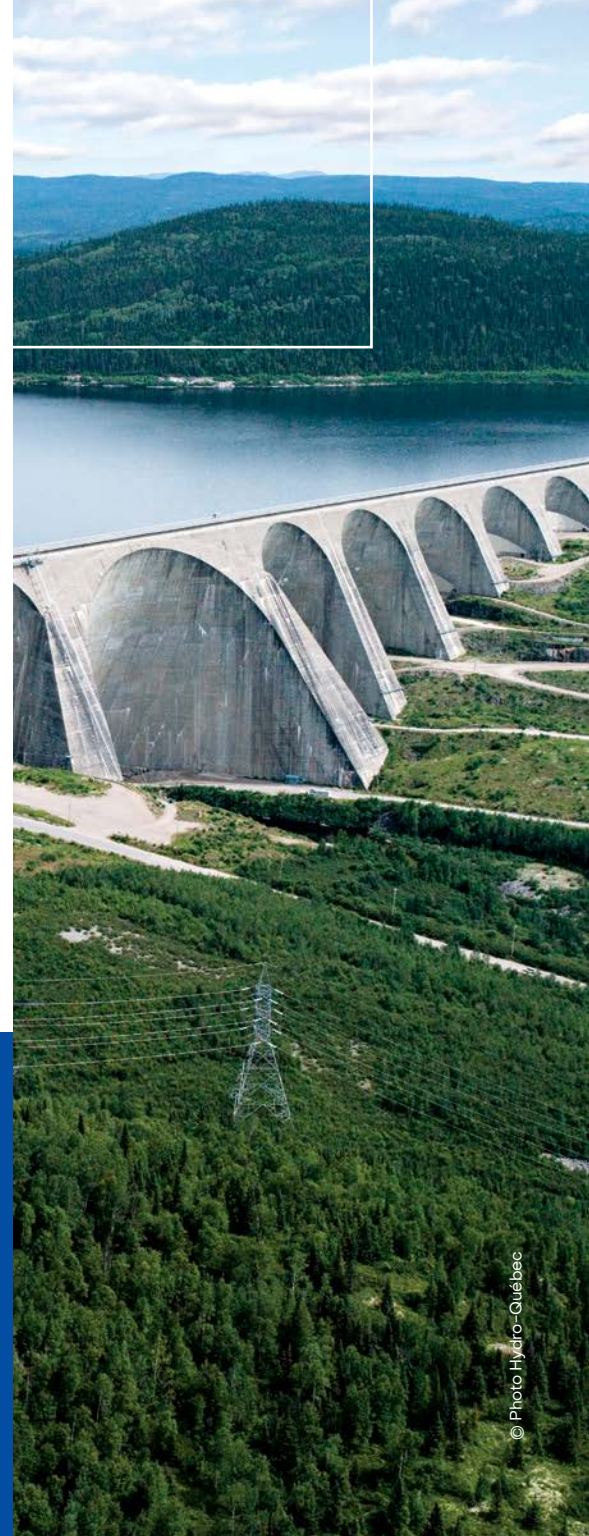

A leader in sustainable and responsible development

Québec is a reliable, ethical, responsible, and sustainable partner for the supply of critical and strategic materials. Its reputation is built on:

- Tailored support from government agencies to foster harmonious development with local communities;
- Research, development, and innovation tools and programs to promote best practices;
- High environmental standards that enhance the image of Québec-based companies.

Communication and transparency, which are strongly rooted Québec business practices, aim to ensure the success of projects, to the benefit not only of the host communities, but of the developers.

Québec ranks among the world's top five producers of hydroelectricity, a green and renewable energy that is available over a large part of the territory thanks to a reliable electricity distribution system.

A partner in your investments

The Gouvernement du Québec favours the realization of economic development projects and investments by maintaining a more attractive and competitive business environment for foreign investors.

In a context where all the stakeholders and partners of the mining sector work in close collaboration, the Gouvernement du Québec is able to support developers and companies actively through Government corporations and their divisions and subsidiaries:

- Investissement Québec:
 - Investissement Québec International;
 - Ressources Québec;
 - SOQUEM;
- Société du Plan Nord;
- Société de développement de la Baie-James.

Québec offers foreign companies a very hospitable business climate for mining investments and a tax system that compares advantageously to those of its trading partners. See the brochure [Taxation in Québec: Favourable Measures to Foster Investment \(2022\)](#)¹ to learn more.

¹ Online: [investquebec.com/Documents/qc/publications/TaxationinQuebec.pdf]

Québec is within reach of American, European and Asian markets thanks to an advantageous geographical position and a network of reliable and well-established infrastructure, even in regions far from major centres.
